

Cutting-edge technology for opening your fabric

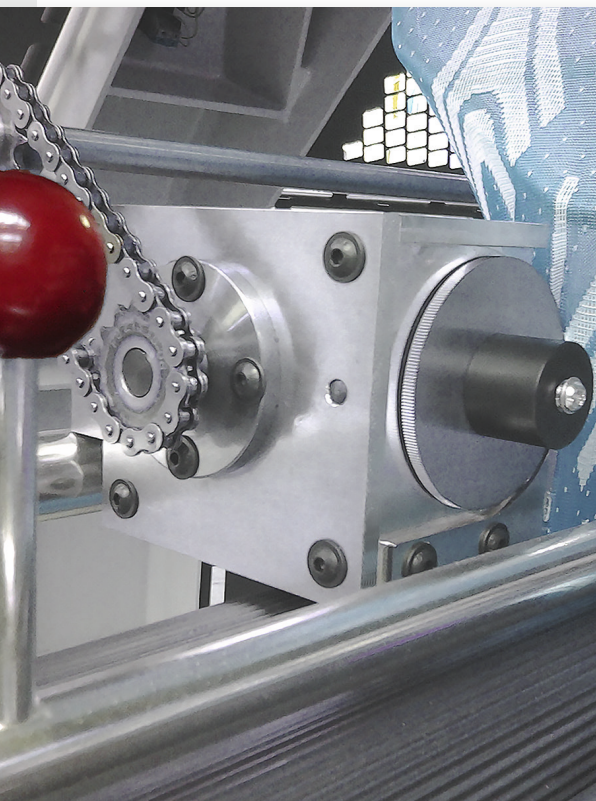

our performance for your profit

Precise opening of the fabric tube following exactly the stitch line without the need of a slit line!*

Mayer & Cie. offers upgrade kits for machines that have been in service at our customers already. Instead of buying a new machine, knitters can enhance their machines' strengths and bring them to a performance nearing that of a current machine.

Automatic cutting and opening of the fabric tube - while knitting

Compact and space-saving design right underneath the spreader.

Your benefits

- ✓ Automatic opening of the fabric tube during the knitting process. Precise opening of the fabric tube following exactly the stitch line without the need of a slit line.*
- ✓ Knitting process remains simple and without compromising on speed, particularly with elastomeric plating.
- ✓ Additional step of cutting the fabric after knitting becomes obsolete.
- ✓ Self-sharpening rotating knives ensure a secure cutting without higher take down forces (in contrast to other static horizontal knives).

* Slit line: small area of the fabric tube where 1 – 3 neighboring needles have been taken out of cylinder.

Available for

- i Available for all machine types.*
- * except for S4 and D4 series machines.

Your Investment*

- i starting at EUR 1,120.00
- * upon request for older machines.
