

Optimised blow clearing for S4 series machines

our performance for your profit

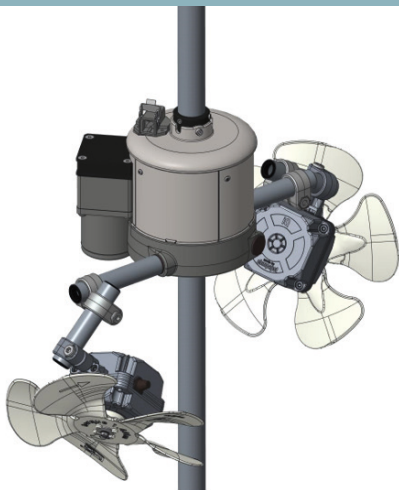

Significantly reduces machine
downtimes

Mayer & Cie. offers upgrade kits for machines that have been in service at our customers already. Instead of buying a new machine, knitters can enhance their machines' strengths and bring them to a performance nearing that of a current machine.

Blow clearing of fluff during knitting process

Particularly recommended for all spun yarns.

Your benefits

The optimized blow clearing for all machines of the S4 series stands for flawless fabric quality and increased machine running times. By blowing off fluff spots during the knitting process, it helps to minimize extra downtimes for cleaning the machine and to avoid a possible lower fabric quality. It can be used in the processing of all spun yarns

- ✓ Blow clearing during the knitting process reduces downtimes needed for cleaning the machine of fluff spots.
- ✓ Higher fabric quality, as less oily fluff spots are knitted into the fabric.

Available for

- i S4-3.2 and S4-3.2 II

Your Investment*

- i starts at EUR 200.00

* Depending on the machine model and creel design.
