

# Performance boosting kit for your OVJA 1.6 EE

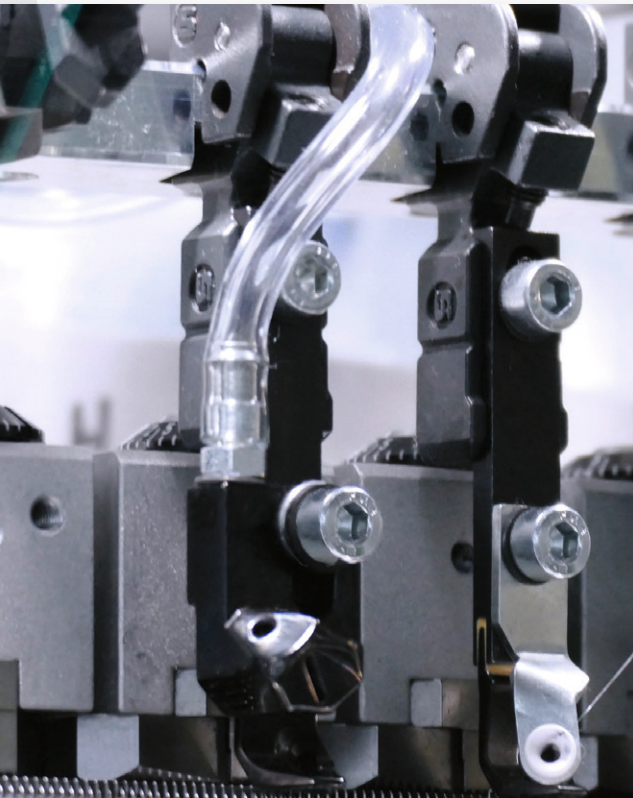

our performance for your profit

Increase your production by up to 20 percent depending on desired patterns and yarns!

Mayer & Cie. offers upgrade kits for machines that have been in service at our customers already. Instead of buying a new machine, knitters can enhance their machines' strengths and bring them to a performance nearing that of a current machine.

## Improved yarn feeding and stitch formation for higher performance

Increased process reliability at up to 17 rpm in 38" diameter.

### Your benefits

The performance boosting upgrade is available for the OVJA 1.6 EE. The increase in speed is based on a more reliable yarn feeding and an improved stitch formation process. The former is granted by a new lay-in yarn guide, an improved stitch cam curve and a steady air flow. In detail, the performance boosting upgrade features the following benefits.

- ✓ Higher process reliability.
- ✓ Fewer drop stitches thanks to constant yarn tension and optimum yarn supply.
- ✓ Steady and reliable yarn feeding at up to 17 rpm at 38".

### Available for

- i OVJA 1.6 EE

### Your Investment\*

- i for machines 38" with flutter-blower  
EUR 15,000.00 (Part-No. 10004637)
- i for machines 38" without flutter-blower  
EUR 15,000.00 (Part-No. 10004635)

\*Provided that the machine is in proper technical condition. This refers to magnets, selection jacks, needles etc. When installing the Upgrade Kit for the first time, we strongly recommend requesting the technical support of Mayer & Cie. Please contact our service department for a quote.
