

Swing box plaiting device

Optimum plaiting for delicate tubular fabrics

our performance for your profit

Mayer & Cie. offers upgrade kits for machines that have been in service at our customers already. Instead of buying a new machine, knitters can enhance their machines' strengths and bring them to a performance nearing that of a current machine.

Sensibly storing delicate tubular fabrics with the folding device

A good match: Folding device and special take down.

Your benefits

Plaiting the fabric with the Mayer & Cie. folding device combined with our swing box is sensible for tubular fabrics made of delicate or elastomeric yarns. In combination with the special take down, it reliably prevents pressure.

- ✓ Clean, appealing storage of fabric.
- ✓ Optimum use of space.
- ✓ Gentle storage without creases and folds.

Available for

- i S4 and D4 series
and all other machine types

Your Investment

- i starts at EUR 1,375.00

Special take down for elastomeric and delicate yarns

our performance for your profit

**Special take down + folding device
≠ center crease***

Mayer & Cie. offers upgrade kits for machines that have been in service at our customers already. Instead of buying a new machine, knitters can enhance their machines' strengths and bring them to a performance nearing that of a current machine.

Special take down for tubular fabrics without pressure marks and center crease

For best results combine the special take down with our plaiting device (see reverse).

Conventional take down = center crease

Special take down ≠ center crease!

More information

on our website

Your benefits

No more center crease in tubular fabrics with the Mayer & Cie. take down for delicate yarns. It consists of two elements. Firstly, there is the spreader keeping the tension constant over the entire tubular and guiding it smoothly, via rotating rolls, towards the take down rollers. Secondly, there are the take down rollers which feature positionable rubber rolls with rounded edges on the tubular's relief end. This prevents stitches from being pressed or bent in this area.

- ✓ Tubular fabric without center crease and pressure marks.
- ✓ Tubular fabric useable in its entire open width.
- ✓ No limitations in cutting and processing the fabric.
- ✓ Best results in combination with Mayer & Cie. folding device.

*** IMPORTANT:** Winding up the fabric will undo the effect of the special take down.

Available for

- i all S4 and D4 series as well as Relanit 3.2 S type.

Your Investment

- i EUR 2,990.00
