

# Upgrade Kit CapstanWheel for braiding machines

Economical solution

our performance for your profit

The friction wheel is an alternative take-off unit in the braiding process. It is particularly suitable for smaller hose diameters and braiding with yarns or wire.

## Take-off unit for textile braiding and small diameter hoses

Matching the braiding set-up to your needs.

### Your benefits

The braided hose is wound over the capstan wheel whose rotation pulls the hose out of the braiding deck. It is then fed to a take up unit.

- ✓ Economically attractive pulling solution.
- ✓ Constant pitch length.
- ✓ Compact design.
- ✓ Draw back roller prevents hose return.
- ✓ Preservation of braided surface.

### Available for

- i All MR 11 and MR 15 machines up to 24 Carrier can be equipped with the capstan wheel pull-off. It is particularly suitable for small diameter hoses and braiding with yarns or wire.

### Your Investment
